

Teifs TEK TIPS

June 2004
Category 2

Detailing Series

The issue:

PENETRATIONS

*All sealant not shown for clarity. Not to scale

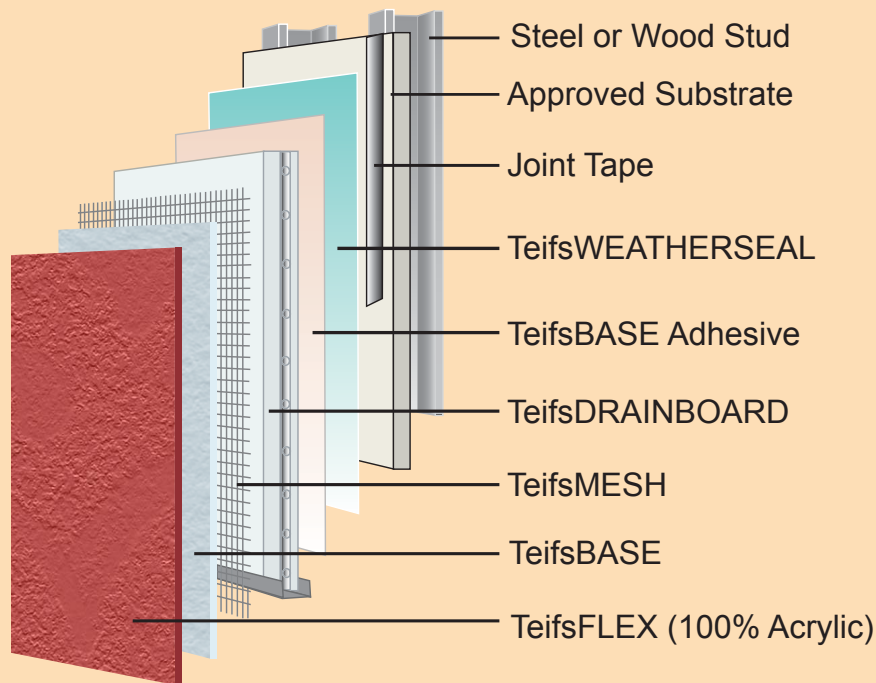

NOTES

- Large penetration openings must be backwrapped with base coat and reinforcing mesh and held back from the pipe to allow for backer rod and compatible sealant.
- Sealant should not be attached to the finish coat
- Joint size is the responsibility of the project designer and shall be noted on project drawings. See Teifs Sealant TekTip for more information on sealant types and uses.

For information on sealant and other details, contact Teifs or view our technical information online at www.teifs.com.

Teifs WEATHERTIGHT Wall System

This Exterior Insulation and Finish System features multiple layers of protection against water penetration:

- ❖ *TeifsWEATHERSEAL, a special 100% acrylic air shield and waterproof protective coating*
- ❖ *TeifsDRAINBOARD, exclusively patented with vertical and horizontal drainage channels*
- ❖ *TeifsLAMINA (base coat, mesh, and finish), tested above and beyond industry standards*
- ❖ *Drainage Track*
