CSI SECTION 07 25 00 – Weather Barriers
CSI SECTION 07 27 26 – Fluid-Applied Membrane Air Barriers – Trowel On

PART 1 - GENERAL

1.1 SECTION INCLUDES
A. Manufacturer’s requirements for the proper design, use, and installation of a 100% acrylic based, trowel-on, fluid-applied water-resistive & air barrier membrane.

1.2 RELATED SECTIONS
A. Section 03 30 00 - Cast-in-Place Concrete
B. Section 04 20 00 - Unit Masonry
C. Section 06 16 00 - Sheathing
D. Section 07 62 00 - Sheet Metal Flashing and Trim
E. Section 07 90 00 - Joint Protection
F. Section 08 50 00 - Windows
G. Section 09 21 16 - Gypsum Board Assemblies

O. ASTM G155 Accelerated Weathering for Exposure of Non-metallic Materials and G153
1.4 SYSTEM DESCRIPTION
A. 100% acrylic based, trowelable water-resistant and air barrier membrane. Designed for use as an
water-resistant and air barrier behind EIFS and other claddings. This product is installed over glass
mat gypsum sheathing, cement board sheathing, CDX plywood, OSB*, concrete or CMU. The
system is qualified to OSB (oriented strand board) sheathing only in areas shown in the
manufacturer’s Acceptable Substrates and Areas of use Technical Bulletin.
B. Functional Criteria:
   1. General:
      a. Flashing: Flashing must be continuous and watertight. Flashing must be designed and
         installed to prevent water infiltration behind EIFS and other claddings. Refer to Division 07
         Flashing Section for specified flashing materials.
   b. The configuration of the water-resistant barrier, drainage plane and flashing and cladding
      assembly materials, must allow for the egress of incidental moisture.
2. Performance Requirements:
   a. System to meet the performance and testing requirements of the International Code Council
      Acceptance Criteria AC 212 and ASTM E2570.

1.5 SUBMITTALS
A. General: Submit Samples, Evaluation Reports and Certificates in accordance with Division 01 General
Requirements Submittal Section.

1.6 QUALITY ASSURANCE
A. Qualifications:
   1. All materials must be manufactured or sold by an active Manufacturer Member of ABAA and must
      be purchased from its authorized distributors.
   2. Manufacturer: Must be an active member of ABAA.
   3. Applicator:
      a. Must have attended manufacturer’s Educational Seminar.
      b. Must possess a current manufacturer’s certificate of education.
      c. Must be experienced and competent in installation of plaster-like materials and liquid-applied
         weather-resistive membranes.

1.7 DELIVERY, STORAGE, AND HANDLING
A. Delivery: Deliver water-resistant and air barrier materials in original packaging with manufacturer’s
   identification.
B. Storage: Store materials in a cool, dry location, out of sunlight, protected from weather and other
   harmful environment, and at a temperature above 40°F (4°C) and below 110°F (43°C) in accordance
   with manufacturer’s Instructions.

1.8 PROJECT / SITE CONDITIONS
A. Installation Ambient Air Temperature: Minimum of 40°F (4°C) and rising, and remain so for 24 hours
   thereafter.
B. Substrate Temperature: Do not apply water-resistant and air barrier materials to substrates whose
   temperature are below 40°F (4°C) or contain frost or ice.
C. Inclement Weather: Do not apply water-resistant and air barrier materials during inclement weather,
   unless appropriate protection is employed.
D. Water-resistant and air barrier materials must not be applied if ambient temperature exceeds 120°F
   (49°C) or falls below 40°F (4°C) within 24 hours of application. Protect base coat from uneven and
   excessive evaporation during hot, dry weather.

Material Test                          Method               ICC and ASTM E2570 Criteria | Results       |
----------------------------------------|----------------------|------------------------------|---------------|
Water Penetration                       ASTM E331           | 2.86 psf (137 Pa) for 15 minutes | Pass 25.4 psf (1216 Pa) for 165 minutes |
----------------------------------------|----------------------|------------------------------|---------------|
Water Penetration                       ASTM E331           | Tested after Structural Loading, Racking and Restrained Environmental Cycling at 2.86 psf (137 Pa) for 15 minutes | No Water Penetration |

Weathering                             ICC ES AC 212 / ASTM E2570 | 210 hours of UV Exposure, 25 cycles of accelerated weathering, 21.6 in (549mm) water column for 5 hours | Pass           |
----------------------------------------|----------------------|------------------------------|---------------|
Wind Driven Rain                        F.S. TT-C-555B       | No Criteria             | Pass                       |
----------------------------------------|----------------------|------------------------------|---------------|
VOC                                    EPA Reference Test Method 24 | US EPA, South Coast AQMD and Greenseal Standard | 10 g/L         |
E. Prior to installation, the wall must be inspected for surface contamination, or other defects that may adversely affect the performance of the water-resistant and air barrier materials and must be free of residual moisture.

1.9 COORDINATION AND SCHEDULING:
A. Coordination: Coordinate water-resistant and air barrier coating materials installation with other construction operations.

1.10 WARRANTY
A. Warranty: Upon request, at completion of installation, provide manufacturer’s Standard Limited Warranty.

PART 2 - PRODUCTS

2. MATERIALS

2.1 MANUFACTURERS
B. Components: Obtain components from authorized distributors. No substitutions or additions of other materials are permitted without prior written permission from Parex USA for this project.

2.2 MATERIALS
A. Water-Resistant Membrane & Air Barrier Coating:
   1. Parex USA WeatherSeal Trowel-On: 100% acrylic, non-cementitious, trowelable water-resistant and air barrier.
   2. Parex USA 396 Sheathing Tape: Non-woven synthetic fiber tape to reinforce the membrane at sheathing board joints, into rough openings and other terminations into dissimilar materials.
   3. Flashing Membrane: Self-sealing, polyester faced, rubberized asphalt membrane, 30 mils (0.76mm) thick.

2.3 RELATED MATERIALS AND ACCESSORIES
A. Substrate Materials:
   2. Cement Fiber Sheathing conforming to ASTM C1186.
   3. Gypsum Sheathing: Minimum 1/2" (13mm) thick, core-treated, weather-resistant, exterior gypsum sheathing complying with ASTM C79.
   4. Plywood: Minimum 7/16" (8mm) thick exterior grade or PS 1, Exposure 1, minimum 7/16" thick, C veneer facing out, panels gapped 1/8" at all edges.
   5. Oriented Strand Board (OSB): 7/16" - 1/2" Wall-16 or Wall-24, approved by the APA, TECO, or PSI/PTL. Stamped as Exposure 1 or Exterior Sheathing with a PS2 or PRP-108 rating.
   6. Concrete Masonry Units (CMU): Non-painted (uncoated).
   7. Concrete (poured or pre-cast).
   8. Other Approved by water-resistant membrane and air barrier manufacturer in writing prior to the project.
B. Flashing: Refer to Division 07 Flashing Section for flashing materials.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Verify project site conditions under provisions of Section 01 00 00.
B. Compliance: Comply with manufacturer’s instructions for installation.
C. Substrate Examination: Examine prior to water-resistant membrane and air barrier installation as follows:
   1. Substrate must be of a type approved by water-resistant membrane and air barrier manufacturer. Plywood and OSB substrates must be gapped 1/8 in (3.2mm) at all edges. Plywood and OSB substrates cut edges (non-factory edges) must be sealed with a water-resistant coating.
   2. Substrate must be examined for soundness, and other harmful conditions.
   3. Substrate must be free of dust, dirt, laitance, efflorescence, and other harmful contaminants.
   4. Substrate construction in accordance with substrate material manufacturer’s specifications and applicable building codes.
   5. Maximum deflection of the substrate must be determined by the requirements of the exterior cladding.
D. Flashing: Flashing must be installed prior to the water-resistant membrane & air barrier coating material and integrated with the wall field membrane to create positive drainage.
E. Advise Contractor of discrepancies preventing proper installation of the water-resistant membrane & air barrier coating material. Do not proceed with the work until unsatisfactory conditions are corrected.

3.2 PREPARATION
A. Protection: Protect surrounding material surfaces and areas during installation of system.
B. Clean surfaces thoroughly prior to installation.
C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 MIXING
A. Mix water-resistant membrane & air barrier materials in accordance with manufacturer’s instructions.

3.4 APPLICATION
A. General: Installation shall conform to this specification and manufacturer’s written instructions.
   1. Flash all rough openings with water-resistant membrane & air barrier coating material embedded with sheathing tape or 4 oz reinforcing mesh.
   2. Treat all sheathing joints, inside and outside corners and all exposed edges at terminations with water-resistant membrane & air barrier coating material and embed sheathing tape or 4 oz mesh.
   3. Embed 4 in. strips of either Sheathing Joint tape or 4 oz. mesh by applying water-resistant membrane and air barrier coating. Trowel-On per application instruction to 4 in. of each side of the joint and embed reinforcing fabric with a stainless steel trowel so that the color of the fabric is not visible.
   4. Apply water-resistant membrane & air barrier coating to the entire surface of the substrate with a stainless steel trowel to a minimum wet thickness of 1.6mm (1/16 inch).
   5. Ensure that the water-resistant membrane & air barrier coating laps onto all tracks and flashing to allow for any incidental moisture to be drained into the track/flashings.
   6. Allow water-resistant membrane & air barrier coating to completely dry before proceeding with additional layers of the assembly.

3.5 CLEAN-UP
A. Removal: Remove and legally dispose of water-resistant membrane & air barrier coating material from job site.
B. Clean surfaces and work area of foreign materials resulting from material installation.
PROTECTION

A. Provide protection of installed materials from water infiltration into or behind them.
B. Provide protection of installed materials from dust, dirt, precipitation, freezing during installation, and continuous high humidity until fully cured and dry.
C. Clean exposed surfaces using materials and methods recommended by the manufacturer of the material or product being cleaned. Remove and replace work that cannot be cleaned to the satisfaction of the Project Designer/Owner.

END OF SECTION

Disclaimer: This guide specification is intended for use by a qualified designer. The guide specification is not intended to be used verbatim as an actual specification without appropriate modifications for the specific use intended. The guide specification must be integrated into and coordinated with the procedures of each design firm, and the requirements of a specific project. For additional assistance, contact Parex USA's Architectural Sales (866.516.0061) or Technical Support (800-224-2626).
